PARTNER WEBINAR

Memfault

NORDICTECH WEBINARS

Building more reliable

Bluetooth LE products

with Memfault

Today's hosts

Heiko Behrens

Head of Product

Devon Yablonski

Partnerships

Ali Aljaani

Developer Marketing Manager

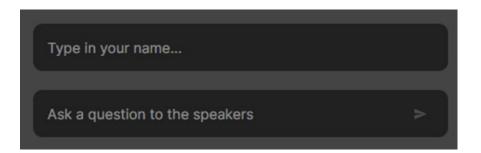

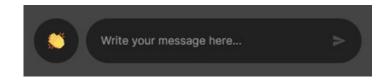

Practicalities

- Duration: ~ 45 min presentation, 15 min Q&A
- Questions are encouraged!
 - Please type questions in the top of the right sidebar
 - All questions are anonymous
 - We will answer them toward the end
- The chat is not anonymous and should not be used for questions
- If you have more questions:
 - Go to <u>DevZone</u> for Nordic-related questions
 - Go to <u>https://memfault.com/contact/</u> for help with Memfault platform
- Recording of the webinar will be available together with the presentation at <u>webinars.nordicsemi.com/on-demand</u>

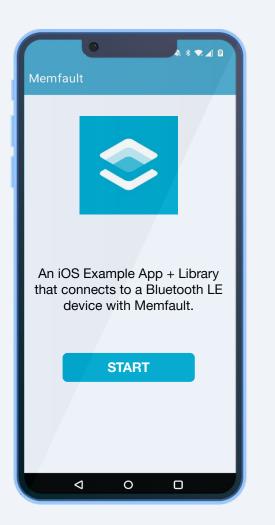

Memfault Partnership

- Enables our customers to ship devices with confidence.
- Deep insights into deployed devices' performance.
- Complete reliability platform
 - Monitor
 - Remote debug
 - Over-the-air updates
- nRF9160 SiP support added since nRF Connect SDK v1.6.0
- Now we have nRF52 and nRF53 Series support in nRF Connect SDK v2.1.0 (the focus of this webinar)

Today's Presentation

nRF Connect SDK now with Memfault for Bluetooth LE!

What is Memfault?

Memfault for nRF52 & nRF53

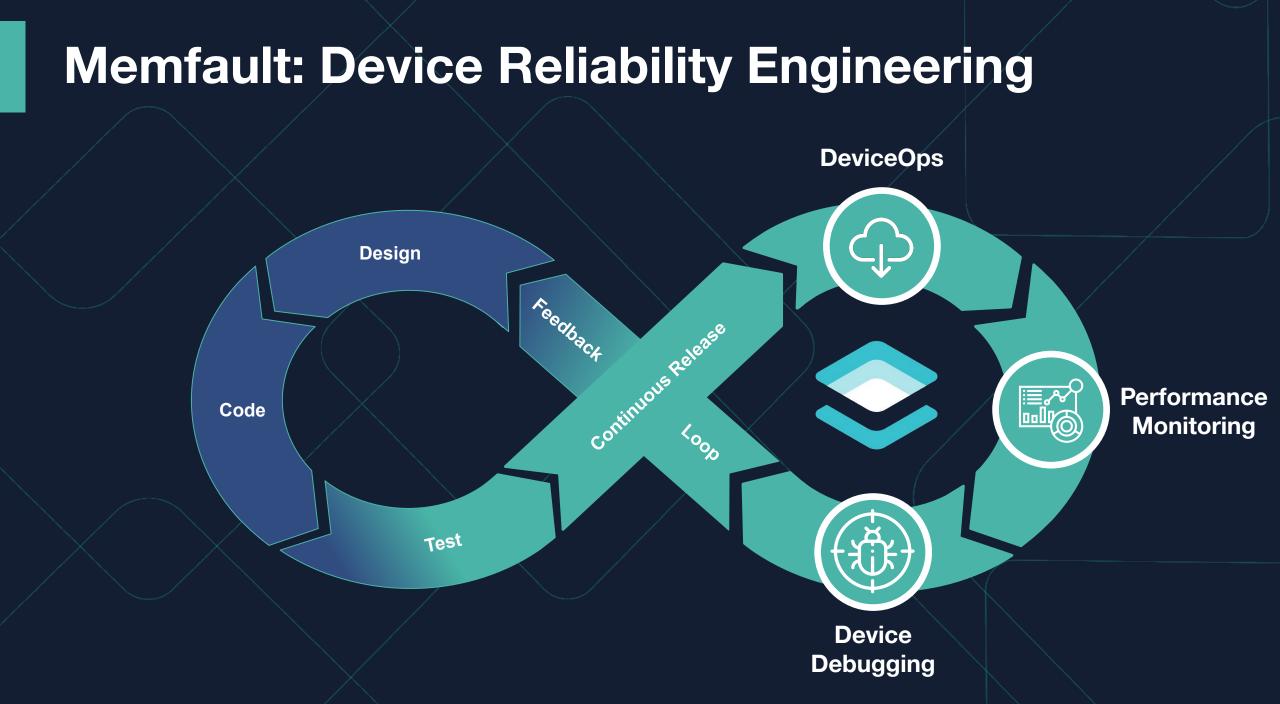

Live Demo

We empower IoT device developers to build more reliable software

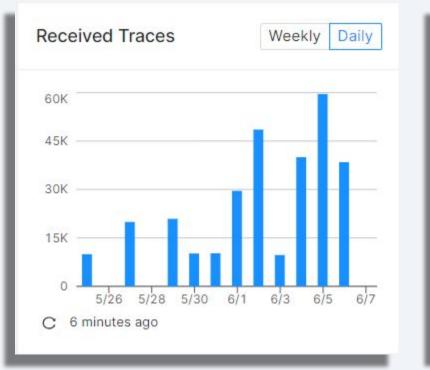

We believe that device reliability engineering gives developers a more scalable and sustainable process to transform the way they build and operate IoT and edge devices.

٠

Issue Analysis At Scale

Detect problems

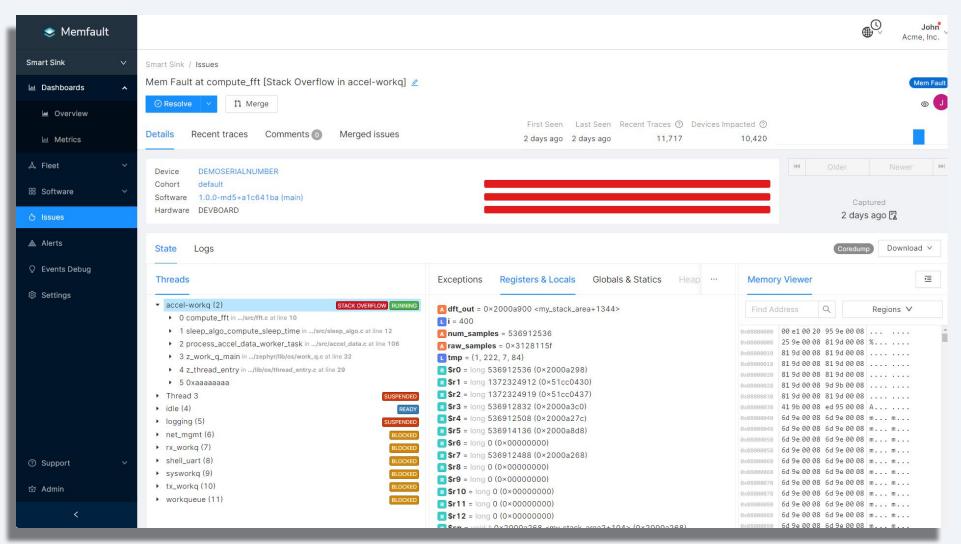

Automatically label and gain insights

Top Issues			
	Issue	Devices	Traces
Assert	Assert at timeout_handler_exec	29556	
Assert	Assert at prv_recursive_crash	20404	I I
Hard Fault	Hard Fault at prv_crash_example	20672	
Assert	Assert at prv_check1	20852	a third as
Assert	Assert at cli_execute	19712	

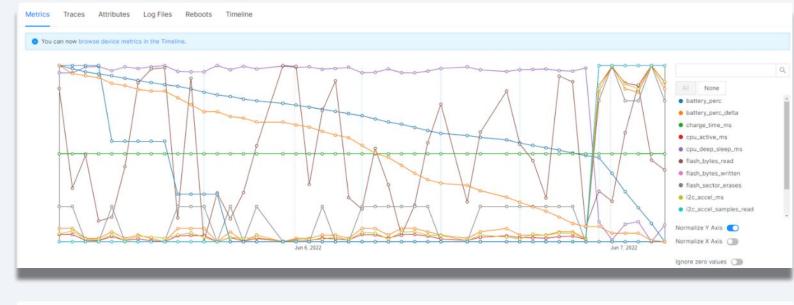

Memfault finds the bugs you care about

Debug Crashes 100% remotely

Memfault eliminates the need to recreate bugs

Metrics with 2 Lines of Code

Memfault - Nordic Solution Partner

Memfault is included for free in nRF Connect SDK v1.6+ on any Nordic chipsets

The idea started with Bluetooth

Memfault for Bluetooth Device Reliability

Designed to work with Bluetooth Connected IoT

Associate Member of the Bluetooth SIG

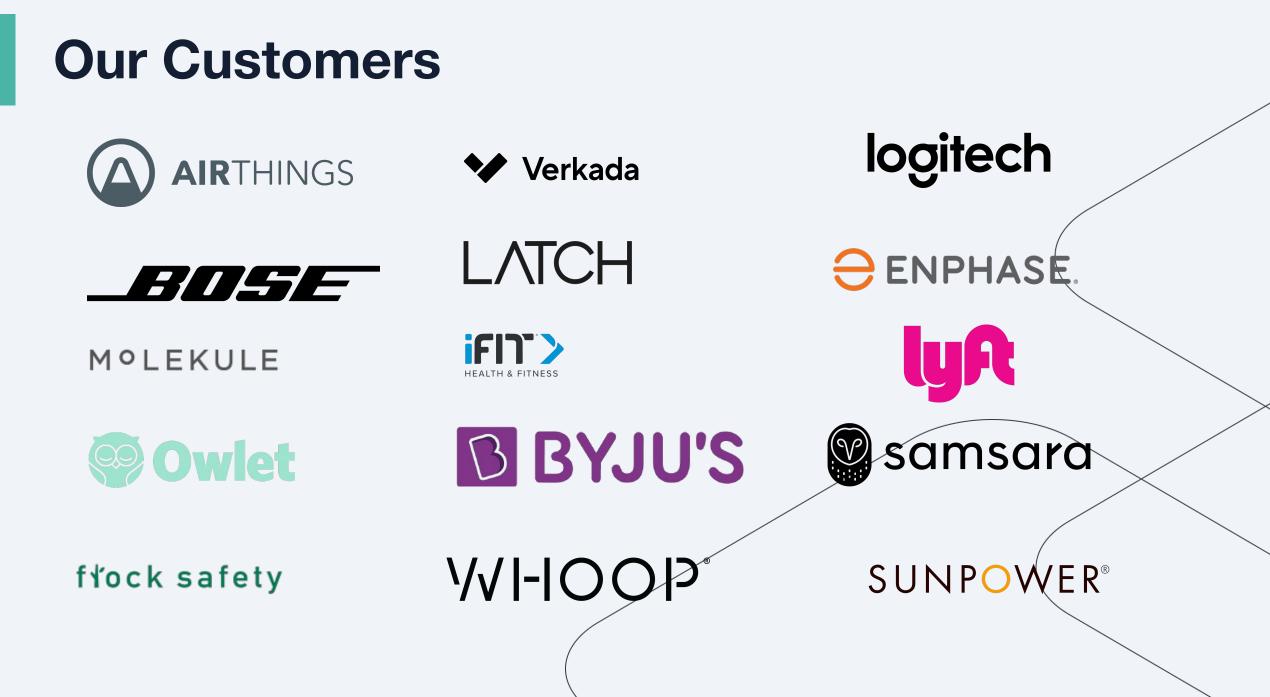

Out-of-the-box support for nRF52 & nRF53 devices

"Integrating Memfault into our Nordic chipsets allowed our team to access high quality field diagnostics data from our wearable technology and improve product performance."

Bill Diken, Director of Embedded Engineering at Whoop

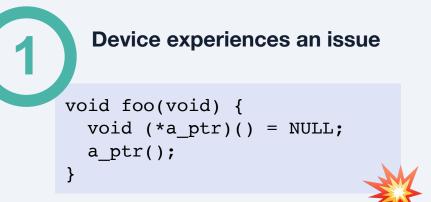

Customers reduce the number of resets per device by 90%

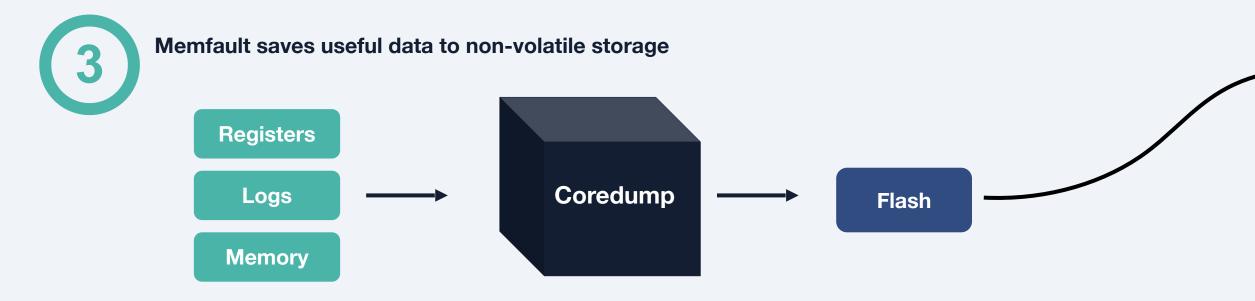

How does it work?

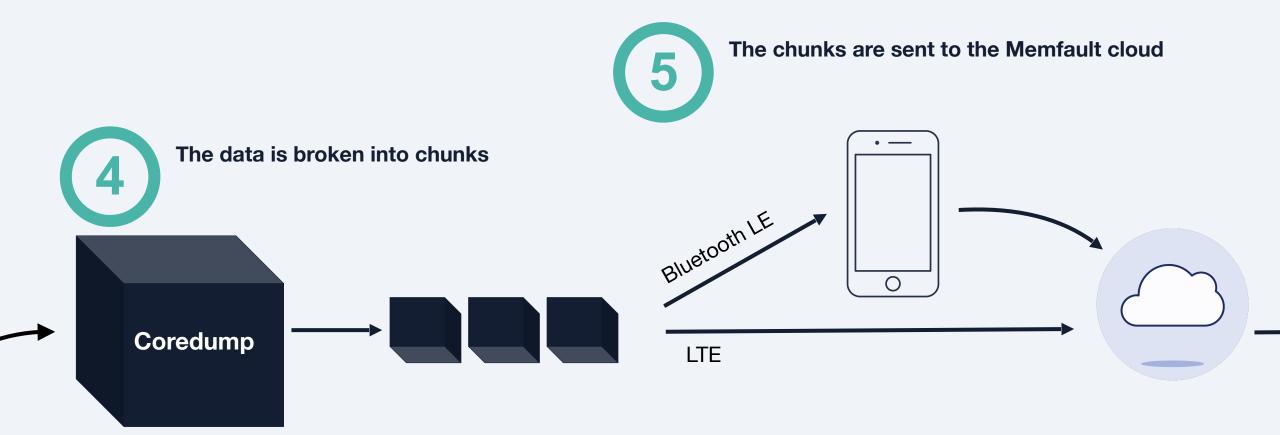

Life of a coredump

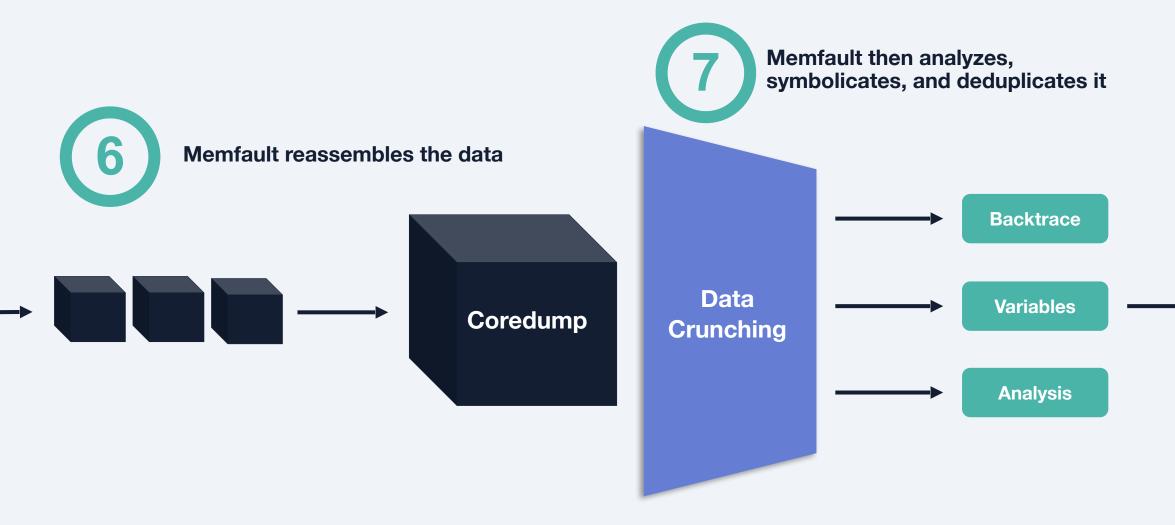

Life of a coredump (cont'd)

Life of a coredump (cont'd)

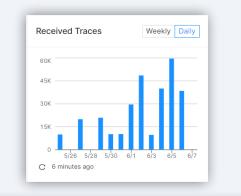

Life of a coredump (cont'd)

Memfault visualizes details, provides overviews, and enables monitoring via alerts

Memfault Diagnostic Service (MDS)

Substant Services & Memfault Diagnostic Service (MDS)

View page source

Memfault Diagnostic Service (MDS) .

The Bluetooth® LE GATT Memfault Diagnostic Service is a custom service that forwards diagnostic data collected by firmware through a Bluetooth gateway. The diagnostic data is collected by the Memfault SDK integrated with the nRF Connect SDK. For more details, see Memfault.

The MDS is used in the Bluetooth: Peripheral Memfault Diagnostic Service (MDS) sample.

Service UUID

The 128-bit service UUID is 54220000-f6a5-4007-a371-722f4ebd8436

Characteristics

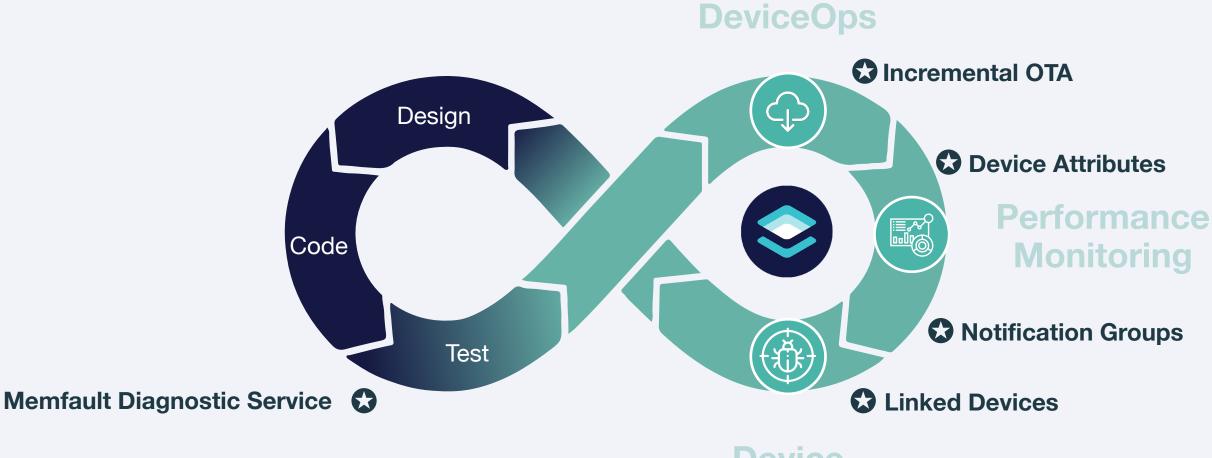

The MDS characteristics are described in detail in the Memfault Diagnostic GATT Service documentation. The service mplementation available in the nRF Connect SDK follows these requirements.

Service UUID

- Characteristics
- Configuration
- Implementation details
- Restricting access
 - Bluetooth privacy
- API documentation
