

Become an expert on power profiling your application

Nordic Tech Webinar

Christian Wilgaard / Senior R&D Engineer
Pål Kastnes / Technical Marketing Manager

December 2020

Today's hosts

Christian Wilgaard

Senior R&D Engineer
Application Group

Pål Kastnes

Technical Marketing Manager
Product Marketing Team

Practicalities

- Duration: about 60 minutes
- Questions are encouraged!
 - Please type questions in the top of the right sidebar
 - All questions are anonymous
 - Try to keep them relevant to the topic
 - We will answer towards the end
- The chat is not anonymous, and do not use for questions
- Go to DevZone if you have more questions
- A recording of the webinar will be available together with the presentation at webinars.nordicsemi.com

Have you ever asked yourself?

- How much power does my application actually use?
- How do I reduce the power consumption of my application?
- How do I extend battery lifetime without sacrificing the functionality of my application?
- What tools do I need to power optimize my product?

Agenda

- Reasons why your application might consume more power than intended, and how to measure it
- Recommendation of tools to use for power optimization of products
- Introduction to our latest release Power Profiler Kit II
- PPK2 demonstration
- Questions and answers

Possible reasons

```
g_init();  
timers_init();  
leds_init();  
power_management_init();  
ble_stack_init();  
advertising_init();  
  
// Start execution.  
NRF_LOG_INFO("Beacon example started.");  
advertising_start();  
  
// Enter main loop.  
for (;;)   
{  
    idle_state_handle();  
}
```

- Not going to sleep
- Logging enabled
 - RTT (Logging over debug port)
 - UART
- Premature wakeup
- SoC peripherals running when not needed

Important to think about

- Sensors
 - Enable only when needed
- Power
 - Select carefully
- Pulldowns
 - Large, but not too large.

Tools

- Debugger
- Logic analyzer
- Multimeter
- Oscilloscope
- Power Analyzer
- Power Profiler Kit
- **Power Profiler Kit II**

Debugger

- Pros
 - Analyze what is happening in your code
 - Set break points at events of interest
 - TRACE
- Cons
 - During development

Logic analyzer

- Pros
 - Read digital lines to measure the timing of your application
- Cons
 - Not for production
 - Price
 - No current consumption information

Multimeter

- Pros
 - Easy to use
 - Can be used for final product measurements
- Cons
 - Low resolution
 - Low detail
 - Instantaneous measurement

Oscilloscope

- Pros
 - Can be used for final product
 - Good accuracy for both timing and current
- Cons
 - Measuring voltage drop over a given resistor values
 - Accuracy drops with larger timescale.
 - Expensive

Power Analyzer

- Pros
 - Very accurate for both timing and current consumption measurements
- Cons
 - Expensive
 - Large and heavy

Power Profiler Kit

- Pros
 - Tailored for low power devices
 - Affordable
 - Tiny
 - Dynamic range switching
- Cons
 - Up to $\sim 70\text{mA}$
 - Low bandwidth
 - Needs external debugger

Power Profiler Kit II

Power Profiling tool for embedded development

Power Profiler Kit II

- High measurement range
- Measure and analyze any embedded HW, including all Nordic DKs.
- Supported by a Power Profiler app in nRF Connect for Desktop
- Kit content
 - One PPK2
 - 4-pin current measurement cable
 - 10-pin logic port cable

Power Profiler Kit II – logic port

- 8 digital inputs for low-end logic analyzer support
- Connect I/O pin(s) on DUT to digital input(s)

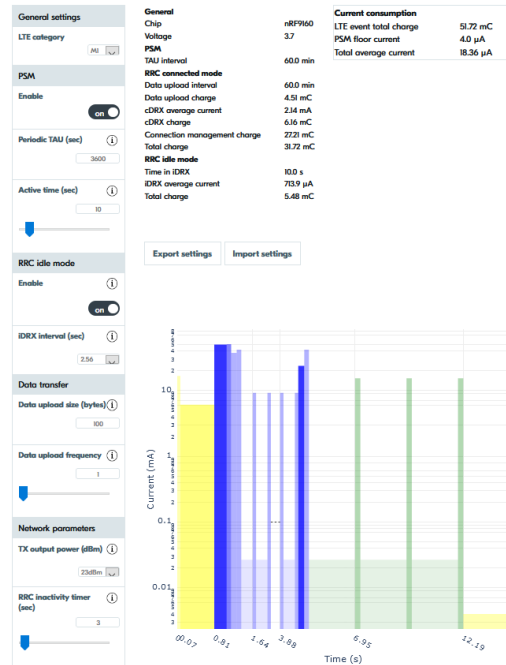

Power Profiler Kit II - highlights

- Max 1A current measurement range
 - 200nA to 1A current range with resolution varying between 100nA and 1mA
 - Supports cellular nRF9160 DK
- 10x faster sampling than first generation PPK
- Ampere meter mode
 - Source mode
 - DUT powered via PPK2 (0.8-5V voltage source)
- Standalone

Online Power Profiler Tool

Online Power Profiler for LTE

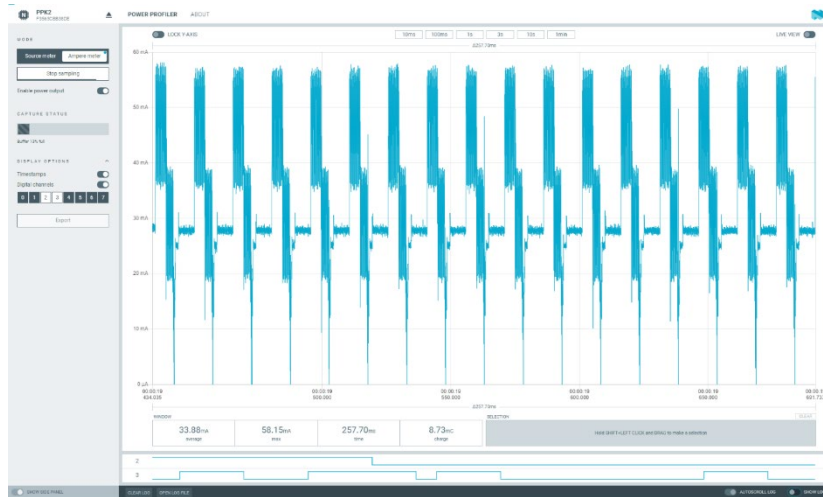

- Complemented by [Online Power Profiler](#) for nRF52 and nRF91 Series
- Possible to export LTE settings, import settings into an [nRF9160 UDP example](#), build and flash to an nRF9160 DK and then measure actual current via PPK2
- Useful to see if you are achieving optimal current consumption values in real life

Why do developers need this?

- Useful tool to track power consumption
- Non-intrusive to final product
- Detailed data to estimate power consumption and battery life
- Spot and debug unwanted current drain during entire engineering cycle
- Simple and cost-efficient (\$89 retail price)
- Updated without any debugger

Demonstration

- Using PPK2 in ampere meter mode
- nRF9160-DK
 - Running asset tracker example
- nRF52840-DK
 - Running beacon examples
 - PWM driver example with digital pins
