

If I use P00 for SDA:

SDA is always high and clock is not consistent:

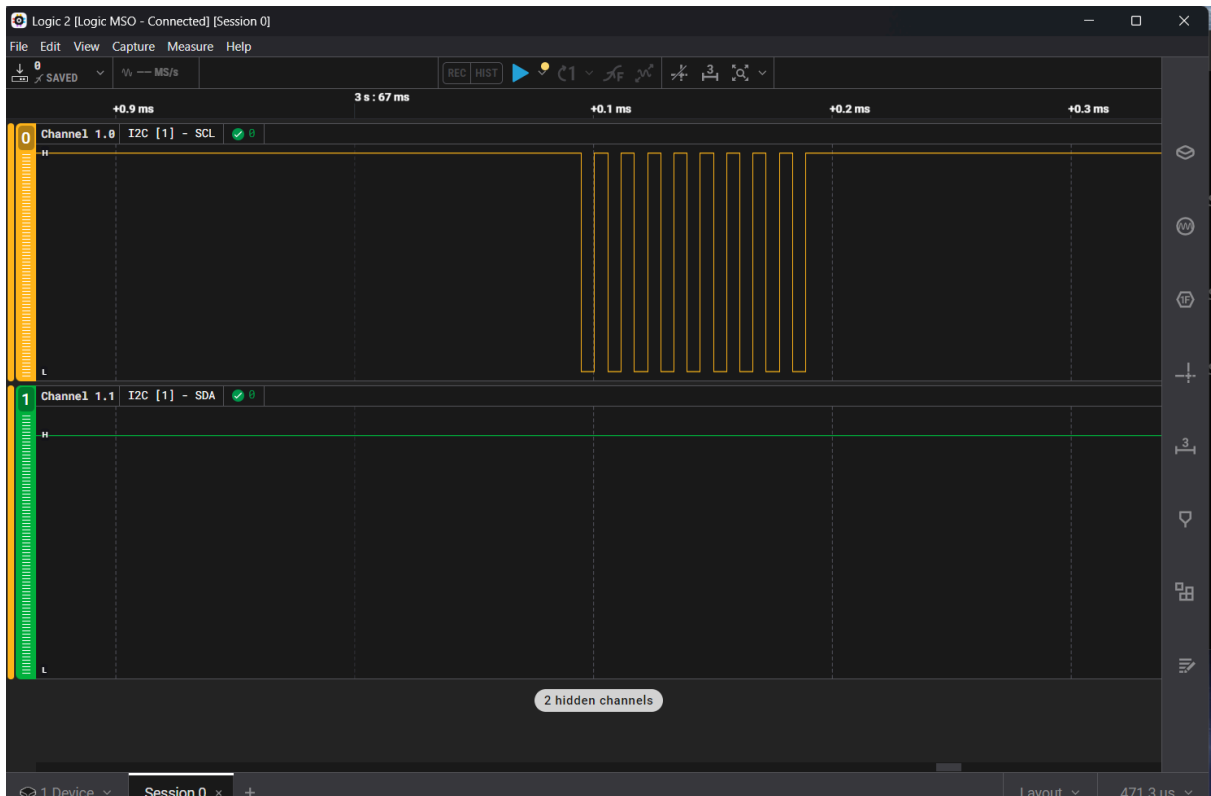

If I use P01 for SDA:

SDA is producing some noise and clock disappears

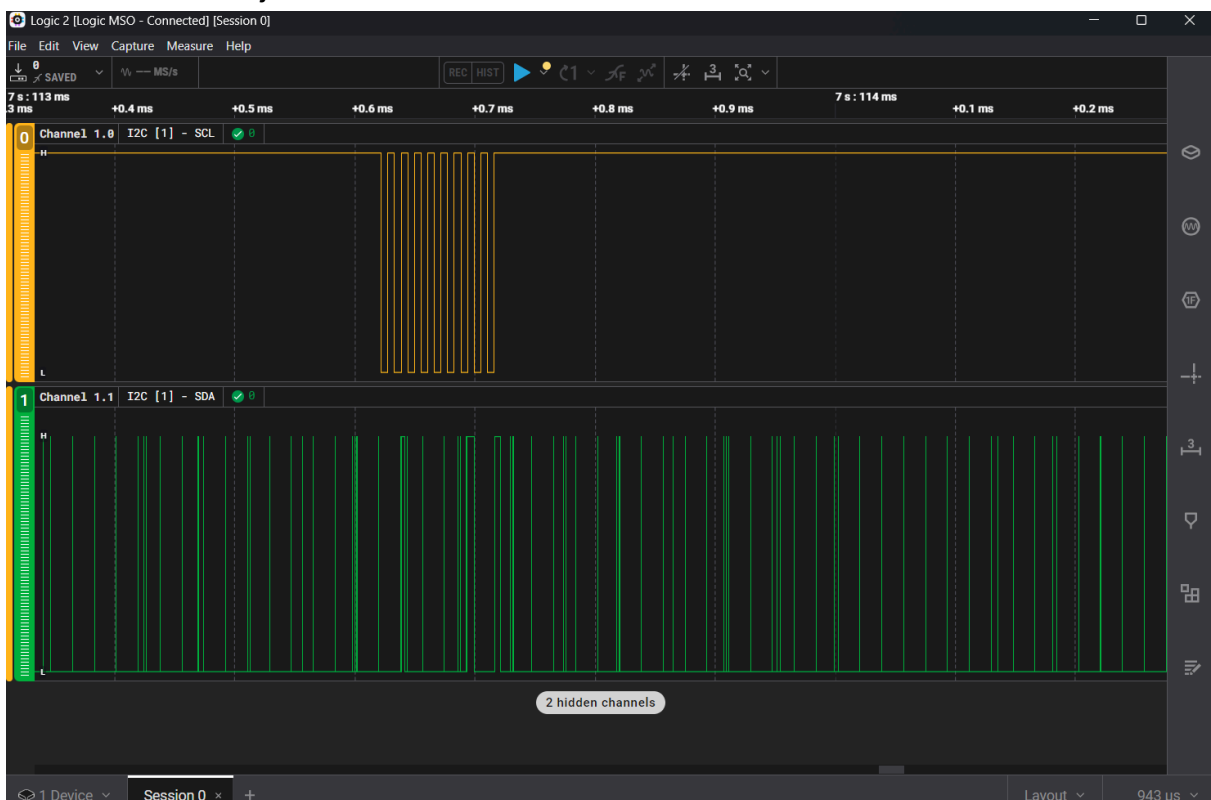

if I use P02 for SDA:

SDA is always held high

if i use P03: SDA is just noise and its held low:

I also tried putting SCL to P03 and SDA to P02

SDA is again held low and it has random noise but it almost looks like a signal
